# ascom Eurit 33 and Ascom Eurit 33 plus – ask

*Our modern style of life is very demanding. And Ascom Eurit 33 and Eurit 33 plus provide digital telephony for the demanding user. Advanced technology makes it possible: A single telephone and up to five users each have their own programmable telephone connection. With personal telephone number, individual settings, even their own personal announcement on the answering machine. The high level of user convenience is packaged in a perfect design. So that telephoning is also easy on the eye.*

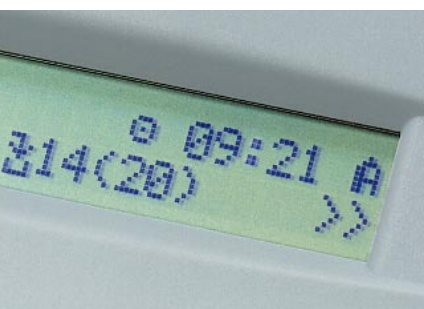

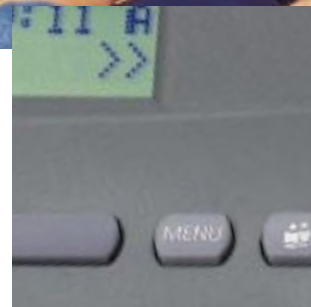

The Ascom Eurit 33/33 plus is the ideal telephone for households consisting of several people, where each wants to have his/her own telephone number. It offers individual setting of the ringing melody and volume, a separate caller list and a special call-charge counter for each user. And in the «plus» version a personal announcement for your own answering machine.

Naturally there are also shared features: The large telephone directory for storing up to 130 names, or the caller list with a maximum of 30 entries. So that it is clear at a glance who received – or missed – what calls and when.

The User Key makes individual operation child's play. The generously dimensioned display shows all commands in plain text. A single press of the Foxkey and the phone is ready for you to make your individual settings. 5 speed-dial keys allow the ten most frequently dialled numbers to be stored. Available to everybody and particularly useful for service numbers.

If you want to take advantage of cheaper calls, the provider selection is just the thing for you. Simply store your provider's number and every call you dial is automatically prefixed.

Would you like other supplementary services? The Ascom Eurit 33/33 plus switches 3-party conference calls, activates the call-charge display or indicates completion of calls to busy subscribers (CCBS).

The Ascom Eurit 33 plus has an easily-operated, integrated digital answering machine with a maximum of 22 minutes recording time and 5 individual announcement texts.

The Foxkey – simple operation and programming without a handbook.

# any five individualists, they'll all agree

The installation of your telephone is incredibly easy – all you need is an ISDN connection. If you have a private branch exchange (PBX) simply connect the phone to the internal S0 interface. And if you're looking for a CTI solution? With the optional PC Dialer II, the Ascom Eurit 33/33 plus can be easily connected to your PC. This allows you to manage telephone directories, keep records of phone calls, connect other applications with a TAPI interface or to load new software versions.

It is also pleasing to the eye. The Ascom Eurit 33/33 plus exhibits perfect design and is available with an interchangeable keypad cover in 6 popular colours.

Ascom Eurit 33/33 plus – digital telephony for the truly demanding.

Easy going thanks to the User key:  Change between users at the simple touch of a key.

10 speed-dial memories are available for telephone numbers or various services and functions.

The interchangeable keypad covers allow you to give your Ascom Eurit 33 and Ascom Eurit 33 plus a personal touch.

I now have the same telephone at home and in the office, and thanks to PC-Dialer II both my telephone directories are always up-to-date. This makes my work at home much easier.

I have to admit that I am extremely thankful that operation of the telephone is so easy. Since I started to work at home for the municipal library, the call-charge counter allows me to keep an accurate record of my telephone expenses without involving great effort.

At last I have my own telephone connection. And when my ringing melody sounds, there is not a mad rush by everybody in the house to answer the call. After all, they don't all have to know who is calling me. This has become more important to me since I have a boyfriend.

Actually I am not a bad student, but occasionally when I've not quite understood what my homework is about, a little help from my friends can be most reassuring. My dad would call it a «3-party conference» call.

I have to leave in a hurry. If only Sarah was home! I wonder if she agrees to my shifting our riding lesson to Saturday afternoon? Never mind, she can leave her message on my answering machine.

Simple software updating via the Internet using the Ascom PC-Dialer II
